

Real Estate System(React JS + ASP.Net Core Web API)

This project is a feature-rich **Real Estate Management System** aimed at optimizing property management workflows and enhancing user interactions. Leveraging ASP.NET Core Web API, React.js, and SQL Server, the system provides robust tools for managing property listings, user roles, and advanced analytics.

Key Contributions:

- **Designed and implemented CRUD operations** for managing property listings, including property details, pricing, location, and availability.
- **Developed role-based authentication and authorization** to secure sensitive data and ensure restricted access based on user roles (e.g., admin, agent, and client).
- **Integrated RESTful Web APIs** to enable seamless communication between the client and server for scalable property operations.
- **Created an interactive dashboard interface** showcasing real-time property data, market trends, and visual analytics using charts and graphs.
- **Implemented advanced search and filter functionality** to allow users to search properties by criteria such as location, price range, property type, and more.
- **Utilized Entity Framework** for efficient database management, with SQL Server as the backend for robust data handling and storage.

Key Technologies:

- **Frameworks:** ASP.NET Core Web API
- **Frontend:** React.js, HTML, CSS, jQuery
- **Database:** SQL Server
- **Tools:** Visual Studio, Postman

Milestones: (10 Weeks Planning)

- **Requirement Analysis (1 Week):** Gather and document project requirements through stakeholder discussions.
- **Database Design (1 Week):** Create database schema with tables, relationships, and stored procedures.
- **Frontend Design (2 Weeks):** Build a responsive user interface using React.js, HTML, CSS, and jQuery.
- **API Creation (1 Week):** Develop core APIs for CRUD operations and key functionalities.
- **API Integration (3 Weeks):** Connect frontend to backend using the created APIs.
- **Dashboards (1 Week):** Create real-time data visualizations and analytics dashboards.
- **Additional Functionalities (1 Week):** Add enhancements and advanced features based on feedback.
